

VUSION ShelfWatch

Automatic Realogram & Real Time Stock-out Detection

ROI-Focused Software

Improved data-driven KPIs

Go further into details with ROI-focused analytics such as retail space allocation per brand or out-of-stock frequencies. Improved indicators will be generated to help you improve your store operations and management.

Instant anomaly detection

Through real-time monitoring, no stockouts, no product misplacement will go undetected.

Real-time shelf status

With computer vision and machine learning, our software is now able to create real-time realograms displaying on-shelf products and their key information: position, price, product name, etc...

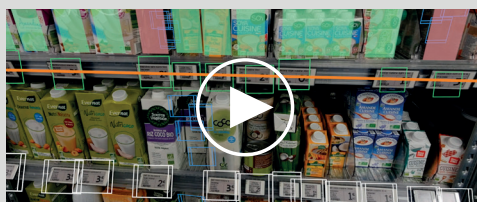

Key functions

- Computer vision based out-of-stock recognition
- Computer vision based automatic geolocation
- Computer vision based facings validation
- Self-learning algorithm based on machine learning
- Event handler for any kind of anomalies
- Data-driven KPIs dashboard
- Augmented reality live dashboard
- Inventory visible on the realogram

Key benefits

-  Geolocation of all products linked to VUSION Labels
-  ROI-focused KPIs (stockouts frequency, space allocated per brand...)
-  Improve availability by identifying out-of-stock items and ensuring their availability
-  Anomalies and stockouts alerts in real-time
-  Enhance visibility through planogram compliance
-  Reduce auditing costs
-  Augmented reality features for brand-retailers negotiations
-  Guaranteed shelf compliance & facing validation
